The rule: sample programs when the program space
is at least 2^8 times smaller than the world space
worlds reaches exact first (n=1687)
programs reaches exact first (n=203)
cut at -8
Number of queries
space_log_ratio = n_annots − em_var
The worlds branch is near-pure;
the programs branch carries the residual error
Purity of the branch
0.747
(n=229)
0.981
(n=1661)
ratio <= -8
-> programs
ratio > -8
-> worlds
